

Top 5 Questions on Moving ISV Solutions from Dynamics AX to Dynamics 365

As you get started on your cloud journey, you may be wondering how to migrate your ISV solutions to Dynamics 365.

Find answers to a few frequently-asked-questions on migrating ISV solutions in this infographic.

1

What is the first step before moving my ISV solutions to Dynamics 365 Finance and Supply Chain Management?

Before you get started with the transition process, ensure that you evaluate your ISV solutions.

You need to:

- ✓ Identify the ISV solutions that you use currently
- ✓ Understand the functionality of these ISV solutions
- ✓ Know the value-add that these solutions bring
- ✓ Find out if the current ISV solution is cloud-ready or you need alternatives

2

I have multiple ISV solutions that need to be moved to Dynamics 365. What would be the best way to minimize the impact?

You can minimize the impact of dealing with multiple ISVs by working with a global ISV supporting many vertical and horizontal solutions. A global ISV can help you mitigate the challenges of moving and maintaining ISV solutions in the cloud.

3

Will the cloud version of an ISV application cost more than the on-premise version?

The best part about moving ISV solutions to the Dynamics 365 cloud is that you can use the application without the overhead costs of installation, updates, and troubleshooting. You can access the application on the web anywhere and on any modern device. In most cases, you do not have to upgrade the hardware when you upgrade the software.

According to a [Forrester report](#), the financial impact of moving to Dynamics 365 in the cloud has resulted in a 109% ROI and 3.4% reduction in total cost of ownership.

4

In the evergreen update approach followed by Microsoft who will maintain the ISV applications?

It can be difficult for you to maintain the applications in the evergreen updates environment. At To-Increase, we follow continuous integration, continuous development (CICD) cycles and take that burden for our customers.

5

How to evaluate an ISV to get started with my upgrade journey to Dynamics 365?

Check if the Dynamics 365 ISV solutions are listed on AppSource. If they are not on AppSource, that means they have not gone through the curation process of Microsoft. But that's not the only criteria for evaluation.

Check for the following:

- ✓ Does your ISV understand CICD?
- ✓ What percentage of code is tested?
- ✓ Can they talk about their release strategy?
- ✓ Can they keep up with the pace of innovation at which Microsoft is working?
